

RaSpect

Version 1.0 — for CirclePV Limited

AI Solar Panel (PV) Inspection — India

AI Solar Inspection — Quotation

Solar Panel (PV) Inspection — Fee Quotation

TENDER	AI Solar Panel (PV) Inspection — India
CLIENT	CirclePV Limited
PREPARED BY	RaSpect Intelligence Inspection Limited
DATE	30 July 2026
REFERENCE	CPL.A.202601
VERSION	1.0 — for CirclePV Limited

AI Solar Inspection — Quotation

1. Quotation Summary

Site	2 blocks · ~11,600 m ² · ~1.16 MWp · India
Capture	Visual + Thermal (IR), 2-person DGCA-certified India crew, ~1–2 onsite days
Deliverable	AI condition-assessment report (PDF) + Inspectica™ platform access
Currency	INR (pre-GST)
Validity	30 days from submission
Lead time	~2–3 weeks from PO (incl. DGCA drone flight permit)

This quotation accompanies the Technical Proposal (Ref CPL.A.202601_solar-panel-inspection). All figures are pre-tax unless stated. Three service tiers are offered so you can match coverage to your asset-management objective.

2. Service Tiers

Tier	Price (INR, pre-GST)	Best for
Standard	35,000	One-off baseline survey — "where are the faults?"
Advanced (recommended)	55,000	Per-panel defect register + engineer review + 12-month platform access
Premium	85,000	Quantified soiling + priority SLA + 24-month access — for performance-critical assets

What each tier includes

Capability	Standard	Advanced	Premium
Onsite drone Visual + Thermal (IR) capture	✓	✓	✓
DGCA flight permit + India local crew	✓	✓	✓
AI defect detection (hot/cold anomaly, crack, soiling)	✓	✓	✓
Panel segmentation + per-panel defect localisation	—	✓	✓
Defect classification + severity register	summary	✓ (full)	✓ (full)
Chartered engineer review + validated report	—	✓	✓

Inspectica™ platform access (view + query)	3 months	12 months	24 months
Soiling quantification (loss %)	—	—	✓
Priority SLA + faster turnaround	—	—	✓
UAV third-party liability insurance (USD 5M)	✓	✓	✓
PDF catalogue of localised visual + thermal assets	✓	✓	✓

Recommended — Advanced (INR 55,000). It is the lowest tier that delivers a per-panel, engineer-validated defect register with 12-month platform access — the dataset an O&M team needs to schedule repairs by severity and track rectification.

3. Fee Schedule

Item	Price (INR, pre-GST)
Standard — Solar PV Inspection (Visual + IR)	35,000
Advanced — Solar PV Inspection (Visual + IR + engineer review + 12-mo platform)	55,000
Premium — Solar PV Inspection (Visual + IR + soiling quant + SLA + 24-mo platform)	85,000
GST @ 18% (additional, at execution)	+6,300 / +9,900 / +15,300
Total (incl. GST, indicative)	41,300 / 64,900 / 1,00,300

GST and any applicable statutory levies are additional, charged as per government norms at execution. Travel & accommodation for the India local crew is included.

4. Commercial Terms

Item	Detail
Currency	INR
Taxes	GST @ 18% and any applicable statutory levies are additional
Travel & accommodation	Included (India local crew)
Contracting entity	RaSpect's India entity (legal name & GSTIN provided on PO)
Payment terms	50% advance on PO; 50% on delivery of the report
Validity	30 days from submission
Lead time	~2–3 weeks from PO (incl. DGCA drone flight permit)
Insurance	India-compliant third-party UAV liability insurance (USD 5M) included

5. Value vs a Basic Drone Survey

India's standard drone-thermography market prices a basic thermal + RGB scan with an AI-processed summary at roughly **Rs. 5,000–15,000 per rooftop site** (or Rs. 8,000–15,000 per MW for small commercial plants). RaSpect sits above that band by design — the difference is what an O&M programme actually needs:

- **Production-grade AI on Inspectica™** — 24+ deep-learning defect models (hot/cold anomaly, cell crack, PID, bypass-diode failure, soiling, panel segmentation), not a one-off heatmap.
- **Per-panel defect localisation + severity register** — every fault geo-tagged to its panel and ranked by cost impact, so repairs are scheduled by priority, not guesswork.
- **Chartered engineer validation** — AI outputs reviewed and signed off by a qualified engineer, not raw model output.
- **12–24 month platform access** — a living dashboard your team can query, trend, and re-inspect against, not a static PDF.
- **Audit-grade documentation** — defensible evidence for warranty claims against module manufacturers and for insurance compliance.

In short: a basic survey tells you that a problem exists; RaSpect tells you which panel, what class, how severe, and what to fix first — and keeps the data live for a year.

6. Optional Add-ons

The base engagement is priced as an entry point. The following optional lines expand the engagement:

Optional item	Description	Indicative price (INR)
Additional site / block	Each site or block beyond the 2 in scope	On request (per-MW / per-site)
Multi-site / multi-year retainer	Recurring quarterly or annual inspection across the CirclePV portfolio	Discounted retainer (10–20% off)
Electroluminescence (EL) imaging	Night-flight EL — detects micro-cracks and PID invisible to thermal	~15,000–25,000 / MW
IV curve tracing	Ground-based string/module electrical performance validation	~5,000–10,000 / MW
Soiling analysis report	Quantified soiling loss (multispectral / calibrated RGB)	~2,000–4,000 / MW
Panel counting + layout verification	Pre-commissioning / insurance audit	~1,500–3,000 / MW
Extended platform access	Inspectica™ access beyond the included term (annual renewal)	On request
Operator training	Drone + Inspectica platform operator training for CirclePV's team	On request
Data integration	API integration to CirclePV's SCADA / CMMS / asset system	On request

Ask us about discounted retainer pricing for multi-site, multi-year programmes — the more sites in the portfolio, the lower the per-site cost.

7. Assumptions & Exclusions

Assumptions

- Scope as stated: 2 blocks, ~11,600 m² (~1.16 MWp), India location.
- Onsite access and safe take-off/landing zones are provided by CirclePV.
- Delivery by RaSpect's India local crew (DGCA-certified).
- Image count and onsite days are estimates; confirmed post pre-site survey.

Exclusions (unless added as an optional line above)

- Additional sites/blocks beyond the 2 in scope.
- Ground-based electrical testing or I-V curve tracing (optional add-on).
- Structural or mounting-system mechanical assessment beyond visual/IR.
- Re-processing of newly captured data after the included platform-access term.
- Any statutory levies other than GST where applicable.

8. Contact
