

VTC Hong Kong — Inspectica AI Façade Inspection Training Proposal

RaSpect Inspectica™

7 August 2026

Prepared for: Vocational Training Council (VTC) — Hong Kong

Prepared by: RaSpect Inspectica™

Trainers: Dhanada Kanta Mishra, Ph.D. (Lead Instructor) and Senior Inspectica Engineer (Technical Lab Lead)

Date: 7 August 2026

Executive Summary

RaSpect proposes a focused, hands-on training programme for VTC Hong Kong: a 5-session course (3 hours per session, total 15 hours) that teaches participants how to plan, capture, process and operationalise AI-driven façade inspections using the RaSpect Inspectica platform. The course combines lectures, live demos and practical labs so learners can run end-to-end inspections, interpret AI outputs and generate actionable Building Condition Score reports.

Course Objectives

- Understand the full Inspectica inspection workflow (data capture → AI inference → scoring → report)
- Operate drones and manage imagery for façade inspection (safety, capture best-practices)
- Interpret model outputs and confidence, and perform human-in-the-loop QA
- Produce standardised Building Condition Score reports and exportable deliverables
- Plan operational rollout and quality assurance for institutional deployment

Target Audience & Prerequisites

- Target: Technicians, instructors and course leads at VTC; facilities or civil engineering students in applied training tracks.
- Prerequisites: Basic familiarity with building elements and standard safety procedures. Laptop with modern browser; (optional) a sample imagery dataset will be provided for hands-on labs.

Format & Delivery

- Format: In-person (preferred) or hybrid (instructor present + remote lab access).
- Duration: 5 sessions × 3 hours = 15 hours (recommended cadence: 2–3 sessions per week or weekly, per VTC scheduling).
- Class size: Up to 12 participants per cohort. Additional participants quoted separately.
- Materials: Slides, step-by-step lab guides, sample datasets, graded capstone brief, and a 30-day Inspectica demo access for each participant (cloud or on-prem demo instance depending on VTC preference).

Detailed Programme (Session-by-session)

Session 1 — Introduction & Platform Overview (3h)

- Topics: Façade safety context, inspection regulations, overview of Inspectica capabilities, evidence chain, data privacy and ethics.
- Demo: Live Inspectica walkthrough — from project creation to report preview.
- Lab: Navigate the Inspectica UI, load a sample project, review sample inference outputs.

Session 2 — Data Capture & Drone Best Practices (3h)

- Topics: Drone ops for façade inspection, flight planning, image overlap / GSD, lighting considerations, safety checklists and permissions.
- Demo: Uploading and organising imagery, preprocess steps (stitching / tiling basics), metadata management.
- Lab: Prepare and ingest a sample imagery set and verify capture quality in Inspectica.

Session 3 — AI Models & Defect Detection (3h)

- Topics: How the Inspectica detection models work, labels & taxonomy, confidence scores, common false positives and tuning considerations.
- Demo: Run defect detection on sample imagery, explore bounding boxes, heatmaps, and confidence filters.
- Lab: Review and correct model outputs (human-in-the-loop), create a labelled QC pass.

Session 4 — Scoring, Reporting & Integration (3h)

- Topics: Building Condition Score methodology, sub-scores (Safety / Serviceability / Sustainability), evidence-based scoring and export formats (PDF, CSV, BIM integration tips).
- Demo: Generate a full Building Condition Score report and walk through the report breakdown.
- Lab: Create a client-ready report from cleaned inspection outputs and export deliverables.

Session 5 — Operationalisation, QA & Capstone (3h)

- Topics: Scaling inspections across portfolios, scheduling, quality assurance workflows, vendor selection, data governance, and procurement considerations.
- Capstone: Teams run an end-to-end mini-project (ingest → detect → QC → score → report) and present results.
- Closing: Summary, recommended next steps, course feedback & certification of attendance.

Assessment & Deliverables

- Hands-on lab exercises and a capstone deliverable per participant team.
- Materials provided: slide deck, lab guides, sample datasets, evaluation checklist.
- Deliverables to VTC: master slide deck (editable), lab guide PDFs, exported sample reports (PDF/CSV), participant attendance and assessment sheet.

Trainer Team

- Dhanada Kanta Mishra, Ph.D. — Managing Director, RaSpect (lead instructor & domain expert)
- Senior Inspectica Engineer — trainer, platform labs & hands-on exercises

Contact for this proposal: dhanadam@gmail.com

Proposed Schedule & Timeline

- Proposed start: within 4 weeks of acceptance (subject to mutually agreed dates).
- Preparation: 1 week for course customisation and creation of a VTC-specific dataset/demo.
- Delivery: 5 sessions scheduled (dates to be confirmed with VTC). Remote/lab environment prepared ahead of first session.

Pricing (Hong Kong Dollars)

Itemised: - Course preparation & custom dataset: HKD 6,000 - Delivery (5×3h) — instructor fees & trainer time: HKD 25,000 - Materials production (slide decks, lab guides): HKD 2,500 - Demo Inspectica access / licensing & technical setup: HKD 4,000 - Travel & incidental expenses (if in-person): HKD 2,500 — **Total (excl. VAT): HKD 40,000**

Pricing notes: Up to 12 participants included. Additional participants: HKD 1,500 per person. Custom curriculum changes or additional hands-on days are quoted separately.

Terms & Payment

- Payment: 50% on acceptance, 50% within 7 days of course completion.
- Cancellation: Full refund if cancelled 14+ days before start; 50% refund if cancelled 7–13 days before; no refund within 7 days.
- Validity: This proposal is valid for 30 days from the date above.

Acceptance

Please sign and return a scanned/photographed acceptance to confirm dates and we will proceed with scheduling and environment setup.

Signature: _____

Name / Title: _____

Date: _____

Next Steps (if accepted)

1. Confirm cohort size and preferred delivery dates.
2. Confirm whether VTC prefers cloud demo access or an on-premise demo instance.
3. RaSpect will prepare the VTC-specific sample dataset and send pre-course instructions for participants.

Thank you for the opportunity — we look forward to helping VTC build practical AI capability in façade inspection.
